
Improved Build Quality

Posted by rocko - 2008/04/24 20:27

AusJets now has worked to improve the build quality of these budget turbines. While not of the same quality as the JTW and TT turbines, we are now able to offer our own warranty for 25 hours of engine run time. The option of a factory extended warranty is also available at the time of purchase. See our warranty page in the about us menu for more information.

We have had working experience of JJ parts for over 3 years, and in the past year the move for further improvements and performance has been well supported with response to changes from JJ.

For UK and Europe we are able to support the JJ packages and provide a standard 25 hour Warranty. We have changed specs slightly to match the recognised components, such as Festo connectors, GRW bearings, and high spec Hausl Pumps.

The main increase in performance and reliability has come from specialist builders like AusJets and JTW taking the JJ parts and building and testing engines for the Customer. We do not believe that supplying kits is in the best interest of either Customers, or Safety In Use out on the flying field.

We are pleased that Rob and AusJets have also realised the value in supplying low cost, specialist built and tested products.

We think that between us, the range of Engines and Jet Planes will make Jet Flying much more affordable and fun, with a range of scale jets that have been researched and tested.

Keith
